Mighty Metals

I already know:

- The seven continents and five oceans of the world.
- The location of some countries, including in the UK and Europe.
- A continent is a very large solid land mass.

Key Vocabulary:

active	describing a volcano that is erupting or one which may erupt; not extinct
ash	the residue that remains after something has burned
debris	scattered remains of something that has been broken, discarded or destroyed
extinct	describing a volcano that has not erupted for a significantly long period time and is not expected to erupt again; not active
hectares	a unit of measurement for area that is equivalent to 10,000m ²
volcanologist	someone whose job it is to study volcanoes

I will learn:

- continents are usually separated by water or another physical feature such as mountains.
- a volcano is an opening in the Earth's surface through which molten rock, hot rock fragments, ash, gas and steam are released. When this happens it is known as a volcanic eruption.
